

Intra Repiderma

INTRA REPIDERMA THE POCKET-SIZED SPRAY

10 reasons to guarantee effective applications for dairy cows

Maintaining healthy skin and hooves doesn't have to be complicated or expensive. The key is having the right product available precisely when and where you need it. Intra Repiderma puts all signs on green, targeting that this spray application is the future of on-farm maintenance.

1 NO LOST MILK REVENUE

All dairy farmers constantly balance hoof and skin care with milk production. Intra Repiderma requires absolutely no milk withdrawal period, ensuring you can maintain healthy skin and hooves without sacrificing a single drop of milk revenue. This makes it an ideal solution for year-round use, even during peak production periods.

2 SUPERIOR ADHESION

You can easily spray the product on the spot, and it does not leak off. Our patented micronized, organically chelated minerals create superior adherence that remains in place even when cows are walking around in the barn, ensuring optimal contact time for effective skin care.

3 ECONOMICAL SOLUTION

Each bottle delivers exceptional value, providing up to 80-100 applications, which significantly reduces the cost per use compared to other products. You'll appreciate how far a single bottle goes, making Intra Repiderma not just effective but also budget-friendly for your operation. The concentrated formula on the spot requires less product for each application. With a three-year shelf life from production date, Intra Repiderma maintains its effectiveness long after purchase, eliminating concerns about product waste and maximizing your investment.

4 MULTI-PURPOSE APPLICATION

Why stock multiple specialty products when one can serve so many purposes? Intra Repiderma's versatility makes it a vital tool for various needs around the farm. This multi-purpose product simplifies your inventory while delivering consistent results across applications, from supporting healthy navels in newborn calves to maintaining skin after dehorning procedures.

Pioneers in future proof solutions

5 360-DEGREE SPRAY

The innovative valve system allows spraying from any position, even upside down. This makes it simple to reach difficult areas without awkward positioning or product waste. This feature is particularly valuable when working with cattle in headlocks or milking parlours where access to udders and hooves may be limited by equipment or animal positioning.

6 PROTOCOL INTEGRATION

Intra Repiderma fits seamlessly into the proven Intra Hoof-fit protocol as an essential maintenance application. It builds on the trusted and proven system, providing additional support between regular hoof trimming and Hoof-fit Gel applications. This systematic approach helps maintain optimal hoof health throughout the year.

7 ANTIBIOTIC-FREE FORMULA

In an era of increasing scrutiny on antibiotic use, Intra Repiderma offers a way to support healthy skin and hooves without the need for antibiotics. The formula utilizes organically chelated minerals instead of harsh chemicals, aligning it with modern farming practices that focus on reducing antibiotic dependency while maintaining healthy animals.

8 POCKET-SIZED CONVENIENCE

The convenient size of Intra Repiderma means it can be kept readily available wherever you need it: in a pocket, treatment cart, or milking parlour cabinet. This accessibility ensures prompt application when skin needs support, preventing minor issues from developing into more significant challenges that could affect animal comfort and productivity.

9 ADVANCED MINERAL TECHNOLOGY

Not all mineral formulations are equal. Intra Repiderma's micronized, organically chelated minerals create superior coverage and adherence. This advanced formulation stays where you spray it, giving you confidence that you're providing consistent mineral support to the skin surface.

10 MULTI-SPECIES SOLUTION

If you run cattle, sheep, goats, horses, or pigs, Intra Repiderma simplifies inventory management by serving multiple species with a single product. The same trusted formula that supports healthy skin in cattle works equally well for all other farm animals, making it an ideal solution for streamlining your supply cabinet.
