GEL

INTRA HOOFF-FIT GEL

THE SOLUTION TO CURE DIGITAL DERMATITIS

Managing Digital Dermatitis (DD) effectively doesn't have to be complicated or expensive when you have the right medicine at your disposal. The key is having a proven treatment that actually cures the infection rather than just managing symptoms. Intra Hoof-fit Gel delivers registered medicine performance, targeting DD where it begins and completely healing damaged tissue.

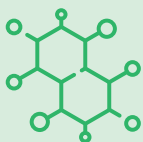

1 REGISTERED MEDICINE STATUS

Intra Hoof-fit Gel isn't just another hoof product making vague claims. In Canada, it is registered as a medicine with a Drug Identification Number (DIN). This means it has been proven to cure Digital Dermatitis in an antibiotic-free manner. This DIN registration means we have the clinical evidence to back up our cure claims.

2 GLOBAL TRACK RECORD

Intra Hoof-fit Gel has over 20 years of proven results and is registered as a medicine in more than 10 countries worldwide. Laboratory tests show that when skin gets damaged by the Treponema bacteria, which cause DD, our Intra Hoof-fit Gel completely heals the damage within 10 days.

3 DUAL-ACTION FORMULA

Our Intra Hoof-fit Gel contains organic zinc and copper chelates that work together. The copper chelate kills bacteria hiding in the skin, while the zinc chelate rebuilds damaged cells. You get healing, not just infection control. This means fewer chronic lesions, fewer repeat treatments and healthier cows. This dual action sets it apart from single-purpose treatments.

4 ANTIBIOTIC-FREE SAFETY

Unlike antibiotic treatments that raise concerns about resistance, Intra Hoof-fit Gel provides a safe, antibiotic-free solution for both cows and handlers. While antibiotic sprays and products containing salicylic acid may not stimulate wound healing and can even work against it, our gel promotes natural healing processes. There's no risk of creating superbugs, no safety concerns for farm workers applying the treatment, and no environmental contamination. You get effective healing without the regulatory and health risks associated with antibiotic use.

Pioneers in future proof solutions

5 SUPERIOR ADHESION

We know cows don't stay clean and dry after treatment. Our Intra Hoof-fit Gel bonds to the hoof and stays active for a long period, even when cows go about their normal routine. You're not wasting money on treatments that disappear the minute cows hit a puddle.

6 VISIBLE RESULTS

When farmers follow our three-step protocol (treat on day 0, cover with Intra Tape, check, and, if needed, treat on days 3 and 7), they see their lameness problems disappear quickly. A typical 100-cow herd goes from 20 DD cows down to fewer than two lame cows in 10 days! That's not slow improvement over months. This is a dramatic change to healthy hooves in just over a week.

7 NO MILK WITHDRAWAL

Unlike antibiotic treatments that force you to dump milk for days, our Intra Hoof-fit Gel has zero withdrawal time. Treat a cow in the morning, milk her that evening, and sell every drop. For a farmer producing 40 liters of milk per cow per day, that's real money saved. No more choosing between treating lame cows and losing milk income.

8 PHARMACEUTICAL STANDARDS

Every jar is manufactured in hospital-grade facilities that meet the same standards as those used for human medicine, with a pharmacist verifying each batch before it is released from the plant. This is medicine of the highest quality, ensuring a consistent effect every time.

9 ECONOMIC SOLUTION

Success is beyond the sticker price. Our Intra Hoof-fit Gel breaks the cycle of chronic DD that keeps costing money month after month. When lameness costs you \$350 per case and our treatment costs less than \$3, the math is simple. Our treatment protocol, which allows for a maximum of 3 treatments in 1 week, prevents the need for months of repeated treatments, lost milk production, and early culling.

10 PROFESSIONAL FIRST CHOICE

Ask any professional hoof trimmer who's been doing this for years what they use, and they'll tell you it's Intra Hoof-fit Gel. These are the people who trim 20,000+ cows every year and have tried every product on the market. When someone who's seen it all consistently chooses one product, we should pay attention to that recommendation.
