INTRA HOOF SOL BATH

THE ONE DAY PER WEEK BATH SOLUTION

10 reasons to run effective hoof baths for cattle

After faithfully running footbaths 4-7 days a week and still watching cows limp in your barn, you're tired of products that promise results but deliver frustration. Intra Hoof Sol Bath is the preventive aspect of the proven Intra Protocol. It always starts with the hoof trimmer or farmer, who trims every cow 2-3 times a year. When needed, the hoof trimmer applies Intra Hoof-fit Gel. Between these periods of individual care, a proper protocol using Intra Hoof Sol Bath for the whole herd is required to keep lameness levels low and under control. This weekly bathing protocol actually prevents problems instead of just managing symptoms that keep coming back.

1 ONE-DAY WEEKLY PROTOCOL

While most bath products require 3-5 days per week, our Intra Hoof Sol Bath needs just ONE day at a 5% dosage. University of Nantes research over six months across 9,354 hooves on 52 dairy farms proves it works. Use for two days per week only during startup or herd stress, then maintain with weekly applications for preventive hoof care.

2 SAFER FOR YOUR FAMILY

Unlike harsh alternatives, Intra Hoof Sol Bath contains no corrosive acids, carcinogenic formalin, or environmentally unfriendly inorganic copper sulphate. You can handle it without gloves, and it's gentle on your cows' hooves. This farmer-friendly formula reduces health risks while providing effective hoof care.

3 PROVEN COST SAVINGS

Each bath mix handles up to 250 cow walk-throughs, which is 67% more passes than typical products that require replacement at 150 passes. Combined with one-day weekly use, you use 70-80% fewer litres annually compared to competitors' 3-5 day schedules. For a 250-cow dairy using the bath once weekly, this saves approximately \$2,400 per year compared with conventional products that require daily use. Fewer mixings also mean less labour time and transportation costs.

Pioneers in future proof solutions

4 WORKS IN COLD WATER

Works at any water temperature, unlike formaldehyde and other products that fail below 10°C. No need for heated water systems or seasonal adjustments. Whether warm or cold, your Intra Hoof Sol Bath performs consistently year-round.

5 PH-NEUTRAL AND GENTLE

The pH-neutral formula is gentle on hoof skin and requires no pH monitoring, unlike other products. Simple mixing instructions mean any farm worker can prepare it correctly. Safer for cow comfort and healthier hooves compared to products requiring constant pH testing. No harsh chemical smell or burning sensation that makes cows hesitant to enter the bath.

6 STAYS WHERE YOU NEED IT

Advanced adhesion technology keeps the product on the hooves longer for extended contact time. This superior sticking power means your weekly application protects hooves between bathing days, reducing the need for daily treatments.

7 WORKS WITH YOUR EXISTING SETUP

The regular Intra Hoof Sol Bath has perfect solubility for manual baths. The Intra Hoof Sol Flex version is fully pumpable for automated hoof bath and hoof mat systems. No equipment changes needed: no special pumps, no modified tanks, works with what you already own.

8 ENHANCED WITH ALOE VERA

Contains Aloe Vera and organic, chelated minerals for optimal skin and hoof care. These gentle ingredients support natural hoof health maintenance while keeping hooves conditioned and healthy.

9 BIOGAS DIGESTER SAFE

The Intra Hoof Sol Bath does not have a negative impact on your biogas system like copper sulphate products. Protect your renewable energy investment while maintaining effective hoof care. This is essential for farms working toward Canada's net-zero goals by 2050.

10 RIGHT SIZE FOR EVERY OPERATION

Available in 20L cans, 200L drums, and 1000L totes to match your operation size. From 50-cow herds to 2,000+ operations, you get the right package size without waste. More economical packaging options mean better value for any scale farm.
