

MS AutoHoofClean

24/7 Clean hooves

What is the MS AutoHoofClean?

At MS Schippers, we have developed an innovative footbath alternative, the MS AutoHoofClean. AutoHoofClean is automatic, effortless, and a good way of disinfecting and caring for hooves. Tackle your hoof problems with continuous hygiene and care.

The AutoHoofClean system consists of a mat filled with disinfection and conditioning products, an automatic pump, and a computer for control. The mats are placed at the exits of the milking system so that cows walk over the mat after each milking as they walk back to the group. This happens 3-6 times a day depending on your milking system. The

mat is connected to an automatic pump that ensures the mat is always properly filled to ensure a proper 'flushing effect' of the hooves.

As Hoof health problems have been on the rise, farmers have turned to footbaths to tackle these issues. Typical footbaths are time-consuming, disruptive to the cow flow within the herd, and involve the handling of harsh chemicals. When cows go through the footbath, the first ones through always receive the strongest solution, however, the last through the bath are typically dealing with the most issues. If they are the last through, they will receive the most ineffective product due to soiling. With AutoHoofclean, every cow receives fresh product with every visit!

Traditional footbaths **dry out the skin**, whereas **MS AutoHoofClean conditions the skin**

The Advantages of the MS AutoHoofClean

- 24/7 hygiene and care
- Treatment 7 days a week, average 3-6 times a day
- No more filling or re-filling of hoof baths
- No exposure or handling of harsh chemicals
- No stress for the dairy cows, easy and calm in use
- Every cow receives fresh product with every visit, no more infections caused by dirty or soiled footbaths

The Results of the MS Autohoofclean

HyCheck

Monitor the effectiveness and track the results of your hoofcare program in our new HyCheck App!
