

Proxy-Clean®

The Most Trusted Brand
in Water Line Cleaning

*Celebrating 15 Years of
Proven Performance*

Give Your Birds a **Healthy Start** by Using Proxy-Clean During the First 2 Weeks!

During brooding, the slow moving warm water at the beginning of the flock is the perfect environment in which bacteria and biofilm proliferates. Proxy-Clean is a stabilized hydrogen peroxide and is safe to put through your lines at a low level to provide a constant supply of clean, conditioned water.

Proxy-Clean is trusted to:

- > **Improve health in the first 2 weeks of life.**
- > **Clean water for better performance.**
- > ***Remove bacteria, yeasts, molds and fungus after supplemental products and vaccinations are given.**

*Dual Action
Cleans AND Conditions
your water-lines!*

Three Simple Instructions:

1

Mix stock solution:
250 mL of Proxy-Clean
and 20L of water

2

Inject the stock solution into the water
system at a dosing rate of 1:128 or 1%
(40-50ppm H2O2)

3

Run for 2 weeks to remove
biofilm while conditioning
your water supply

When administering Proxy-Clean to your animals, it is a good idea to discontinue the use of chlorine, sanitizer, vaccines or other medications. Resume use of chlorine and/or other sanitizers after treatment is finished.

***NOTE:** It is recommended that this cleaning/conditioning is done for 24 hours after supplemental products such as acids, electrolytes, essential oils, probiotics and vitamins are added or 7 days after the addition of vaccination products. It is important to remove these products as bacteria, yeasts, molds and fungus use them for energy.
