

MS Easy Nesting

Manual for MS Easy Nesting

- Assemble the metal plate similar to the picture below.
- Assemble the metal plate as low as possible on the pen (on the outside) so as much cloth as possible hangs on the floor.
- Place the metal plate so that the sow cannot reach it with its mouth but not too close to the through (sow may put the cloth in the through and it will get wet)
- The opening in the plate where the cloth is fixed, has to be with the narrow slit facing upwards. The cloth then has to be over one of the pipes. This way the sow cannot pull the cloth from the plate. Use the most low pipe so as much cloth as possible hangs on the floor.
- Lock the bag with one of the stitched corners in the plate.
