# MS Equalization Coating

**Quick  
and easy  
to apply**

**Dust free**

**Long lasting**

MS Equalization Coating is a unique high quality 2 component, self-leveling equalization coating which is easy to apply. Packaging: 25 kg.

## Applications and foundations

- Feed alleys on dairy farms
- To be used on existing concrete floors or floors that are already coated
- Use on bone-dry substrate

## Properties

- Durable and high quality
- Very easy to clean
- Maximum resistance to tire marks and chemicals

## Application Rate

The application rate varies from 2.0 – 5.0 kg/m<sup>2</sup> (4.4 lbs – 11 lbs/ 10 sq. ft.)

Floor condition	New floor	Rough floor	Very rough floor
Coverage	2.0 kg/m <sup>2</sup> 4.4 lbs/10sq. ft.	3.0 kg/m <sup>2</sup> 6.6 lbs/10sq. ft.	5.0 kg/m <sup>2</sup> or more 11 lbs/10sq. ft. or more

In cases of porous or rough concrete the application rate may be higher.

## Quick and easy to apply in 9 simple steps

1. Clean the floor by spraying with MS Cementex

2. Sand the floor, if necessary

3. Sanded floor

4. Make floor dust free (with brush or vacuum cleaner)

5. Define with tape the area that needs to be coated

6. Mix Component A with B

7. Pour the mixture over the surface that needs to be treated

8. Roll out

9. Harden for 24 hours

# Dairy farmers share **their experiences**

## “ **Scott Hastie, Wendon Holsteins, Red Deer County AB**

We installed the MS Equalization coating when we built a new barn. It was easy to put down and there were simple steps to follow. We like this product because the feed stays fresh longer and there is less leftover feed. The bunk is easy to clean and we're able to drive over it with the skid steer. It also looks very nice. It has solved a lot of problems for us.

## “ **Mike and Dave Wipf, Milford Colony Dairy, Raymond AB**

We looked into MS Equalization Coating because our feeding surface became damaged and harder to clean over time. We wanted to change the surface to make it easier to clean with less time and effort wasted. The product was very easy to apply and the cost was a lot less than other products that might not provide the same claims and durability. Since applying the Equalization Coating, we notice that the feed alley is very easy to clean. We were also pleasantly surprised by the additional benefits of coating our feed surface that we instantly encountered with the animals and the feed. During the hottest days of summer the coating remained cool to the touch even though the concrete around warmed up, the feed remained cool and fresh all the way through. There is no caking on the surface and no smell or mold. The cows no longer sort through the feed. They are eating better and more efficiently with less rest feed left behind. After seeing all of the benefits of MS Equalization Coating firsthand, we feel this is a must do for all dairy barns. Especially if the feed surface is eaten up and porous, and on new surfaces if you want to protect the concrete from deterioration by acids and other factors. We are very happy with the results and confident that we made the right choice of floor coating.
