BIRD GARD

Please read the Bird Gard Manual.

The focus of the Bird Gard in the modern Dairy facility is to help protect property and profitability of the Dairy operation. The two most common applications are in a modern free stall barn and for feedstuffs storage.

Application/Coverage

1. Free Stall Barn
The Bird Gard Super Pro or the Bird Gard Pro Plus is recommended to be set up within a free stall facility. The Super Pro provides coverage for up to 500 cows and the Pro Plus provides coverage for up to 200 cows. Speakers are placed at the center of the barn at a height of greater than 10 feet.

2. Feedstuffs protection
Depending on the size of the area to be covered a Bird Gard Super Pro or a Bird Gard Pro Plus is recommended. The Super Pro provides coverage of up to 6 acres and the Pro Plus provides coverage of up to 3 acres. The unit should be mounted close to the area to be protected and at least 10 feet high.
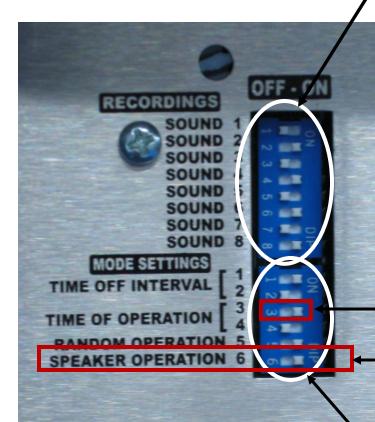

Controller

All units are set up with a photo cell to turn units on and off with light. If you prefer, another option is to use a timer to turn the unit on and off at designated times.

On the back of this page is the recommended configuration of the controller: For maximum results always keep the predatory birds on (please note that some chips come with more than one predator sound.) Once a week switch to the complete opposite configuration. This will prevent the birds from becoming accustomed to the sounds. Our unit comes standard with the #40 chip and #90 chip. These two chips can be used interchangeably to increase your success, other chips are available - please contact us for further information on the other sounds that are available.

BIRD GARD

Note: Factory settings are all **"ON."** You must change your switches.

Always leave the **predator switch ON** (Sound 8 for Chip #40)
Rotate the other switches.

Example:	Change once a week to	Example:
1. OFF		1. ON
2. ON		2. OFF
3. OFF		3. ON
4. ON		4. OFF
5. OFF		5. ON
6. ON		6. OFF
7. OFF		7. ON
8. ON		8. ON

ALWAYS KEEP PREDATOR SWITCH ON.
