

SPECIAL PIGEON CONTROL GUIDELINES

CONSTANT AND CONSISTENT HAZING IS REQUIRED TO RID YOUR AREA OF PIGEONS

Your Bird Gard unit is specifically designed with harassment and predator bird sounds that make the pigeons too uncomfortable to remain in the vicinity. It disrupts their nervous system to the point they are not able to function normally. We do not use distress sounds to repel pigeons because they are carnivorous and will eat dead and dying birds, even other pigeons.

Pigeons are very stubborn birds and the process of repelling them may take 4-8 weeks. It is not uncommon for the pigeons to resist the Bird Gard sounds and even to sit on or near the unit several weeks into the repelling process. You **MUST** be proactive and participate in the initial control by taking down any and all nesting materials and food sources. Continue to keep the area clean and clear of all materials. In the preliminary stages of the process you may also need to incorporate more than one method to disturb the birds such as flicker tape and hazing.

After following these guidelines, if you are not satisfied with the results you are getting, please contact us directly in the U.S. and Canada at 888-332-2328. We would be pleased to assist you further.
